上行：合并相邻块
$g_3 \circ \cdots \circ g_0$
$g_1 \circ g_0$
$g_3 \circ g_2$
g_0
g_1
g_2
g_3
下行：传递前缀
id
id
$g_1 \circ g_0$
id
g_0
$g_1 \circ g_0$
$g_2 \circ g_1 \circ g_0$
叶子 i 再作用 g_i，得到 $\mathbf{x}_{i+1} = (g_i \circ p_i)(\mathbf{x}_0)$
