(a) 连续与邻域控制
(b) 跳跃处不连续
(c) 连续却不可导
函数值
$f(x) = x^2$
$\delta = 1/2$
$\varepsilon = 1/4$
$j(x) = \mathbb{I}\{x \ge 0\}$
$x \uparrow 0$ 时
函数值仍为 0
$j(0) = 1$
$f(x) = |x|$
$f'_-(0) = -1$
$f'_+(0) = 1$
